The Installer 3.0 Revolution

- Super Simple User Interface
- “Do the right thing”
- Multidisk
- “Customize”
- Powerful Scripts

Super Simple User-Interface

System 7.0 Evolution

- Even More Powerful Scripts
- Live Install
 - You're going to love it
 - It's not dangerous
 - No more Systems on your disk
- Network installations? You bet!

Your Installation Strategy

- If you could possibly drag it over, don't use the Installer
- One Function – One Icon
 - AppleShare – should be one icon
 - ADSP – should not exist

Why I Might Need the Installer

- 800K is really so small
- The Installer is your access to the system file
 - *But why are you changing the system?*
- You are installing multiple applications

Script Control - Splash Screen

Welcome to the Apple Installer

Your Macintosh needs certain software to start up.

The Installer places this software on your disk
in the System Folder.

System Folder

“Easy Install” chooses the software Apple recommends and
creates a disk which can be used to start up your Macintosh.

(“Customize” if you are sure you want to override those
recommendations.)

OK
