International System Software

Technical Challenges of International Design

Introduction

Directions

- International Markets
- The Script Manager
- Multiple Languages
- Universal Character Encoding

Why International

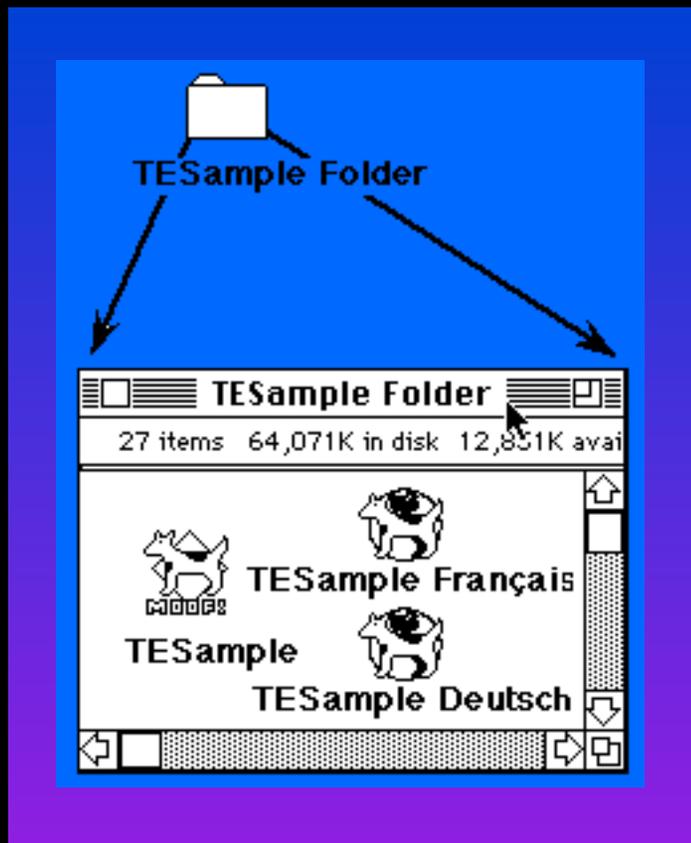

- Significant proportion of the hardware base
- Higher growth than US
- More opportunity

The Script Manager

- Framework for multiple scripts/character sets
- System support for your application
- Use it:
 - With unfamiliar languages or scripts, or
 - When the standard behavior is appropriate,
 - Otherwise...

Multiple Languages

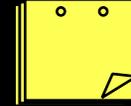

- Within your document
- In presenting your application
 - Ask for the system language
 - Choose a resource file
 - For the adventurous: runtime switching!

Universal Character Encoding: *Unicode*

- Constant Width, 16-bit Encoding
- Full Encoding: 65,000 characters
- Superset of existing standards
 - ISO 5426, 5427, 5428, 6438, 6861, 6862, 8859, 6937; ISCII; GB; JIS; KSC; CNS,...
- Dynamic composition
- CJK unification

Unicode Status

- Coöperative efforts
 - Major collaborative effort from Xerox
 - Industry wide input
- Draft 2, issued on March 23
 - 24 Alphabetic scripts
 - Over 1,000 symbols
 - Over 18,000 CJK characters

The power to be your best
