Conference

# AppleShare IP Update

*John Hanay*

**Sr. Product Marketing  
Manager**

# Agenda

---

- **Progress on AppleShare IP 5.0**
- **Overview of AppleShare IP 5.5**
- **AppleShare on Rhapsody**
- **Demonstrations**
  - **Open Door Networks and Service Location**
  - **Vicom Technologies**
- **Q&A**

# AppleShare IP 5.0

---

## *Status update*

- **Adopted a tiered pricing model**
- **Expect to GM in a week or so**
- **Ship near the end of the month**
- **Customer feedback points to broad adoption of AppleShare IP 5.0**
- **AppleShare IP 5.0 expected to ship 40K units during next six months**

# AppleShare IP 5.5

---

## *General features*

- **Support for new Apple Power Macintosh systems and Workgroup Servers**
- **Support for Mac OS 8**
- **Qualification of PowerPC 603e-based Apple Power Macintosh systems**

# AppleShare IP 5.5

---

## *File and Web Services*

- **IP Filtering**
- **Support for Windows 95, NT, and 3.x, DOS and OS/2 clients via SMB over TCP**
- **Support for WebStar plug-ins via W\*API**
- **Separate web guest privileges**

# AppleShare IP 5.5

---

## *Mail Services*

- Support for Internet standard IMAP v4 clients via IMAP mail server
- VT WIN integration for IMAP searching

# AppleShare IP 5.5

---

## *Print Services*

- **User Authentication**
- **Developer API for accounting, etc.**
- **Support for printing over TCP/IP**

# AppleShare IP 5.5

---

## *Schedule*

- Targeting Q2 (Jan–Mar)
- Internet beta in Fall timeframe

# AppleShare on Rhapsody

---

- **Our goal is to migrate AppleShare to Rhapsody as soon as possible**
- **Maintain our strengths in ease-of-use and lowest cost of ownership**
- **Extend our reach by embracing the strengths of Rhapsody**
  - Reliability
  - Scalability
  - Performance

Q&A

# AppleShare IP and Service Location

*Alan B. Oppenheimer*

*Open Door Networks, Inc.*

# Service Location—The Next Step in Migrating from AppleTalk to IP

---

- Many popular services are IP already (Web, FTP)
- Other services are both AppleTalk and IP (AppleShare)
- What's missing? AppleTalk's ability to easily find and access these services

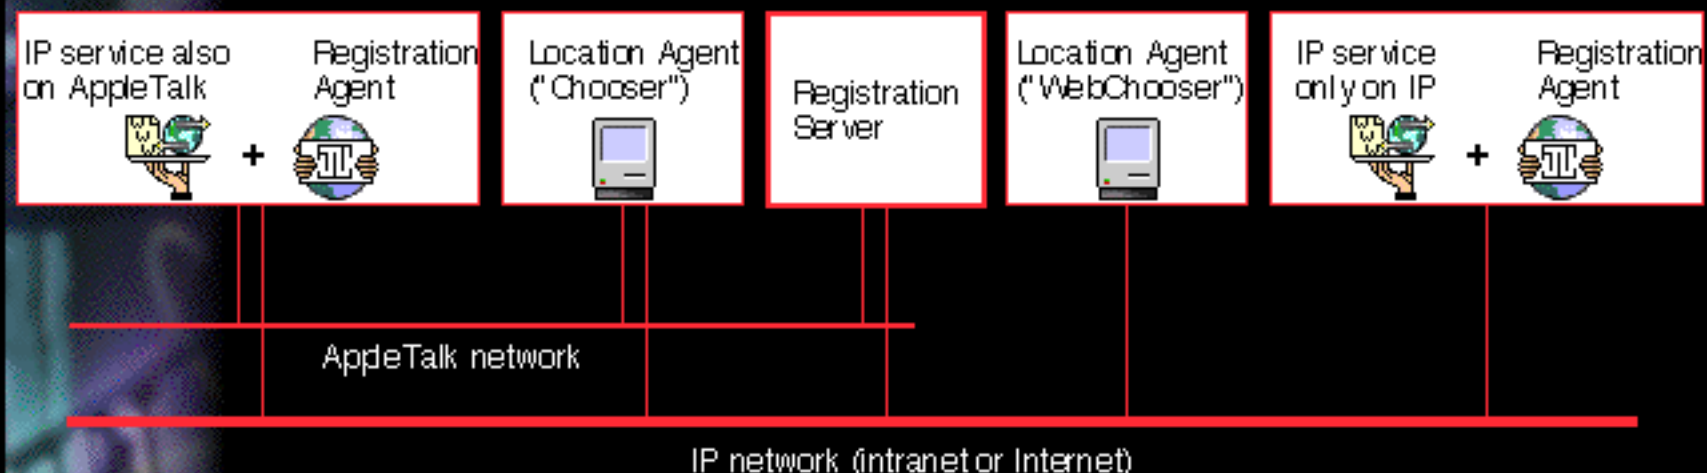

# Open Door's Service Location Effort

---

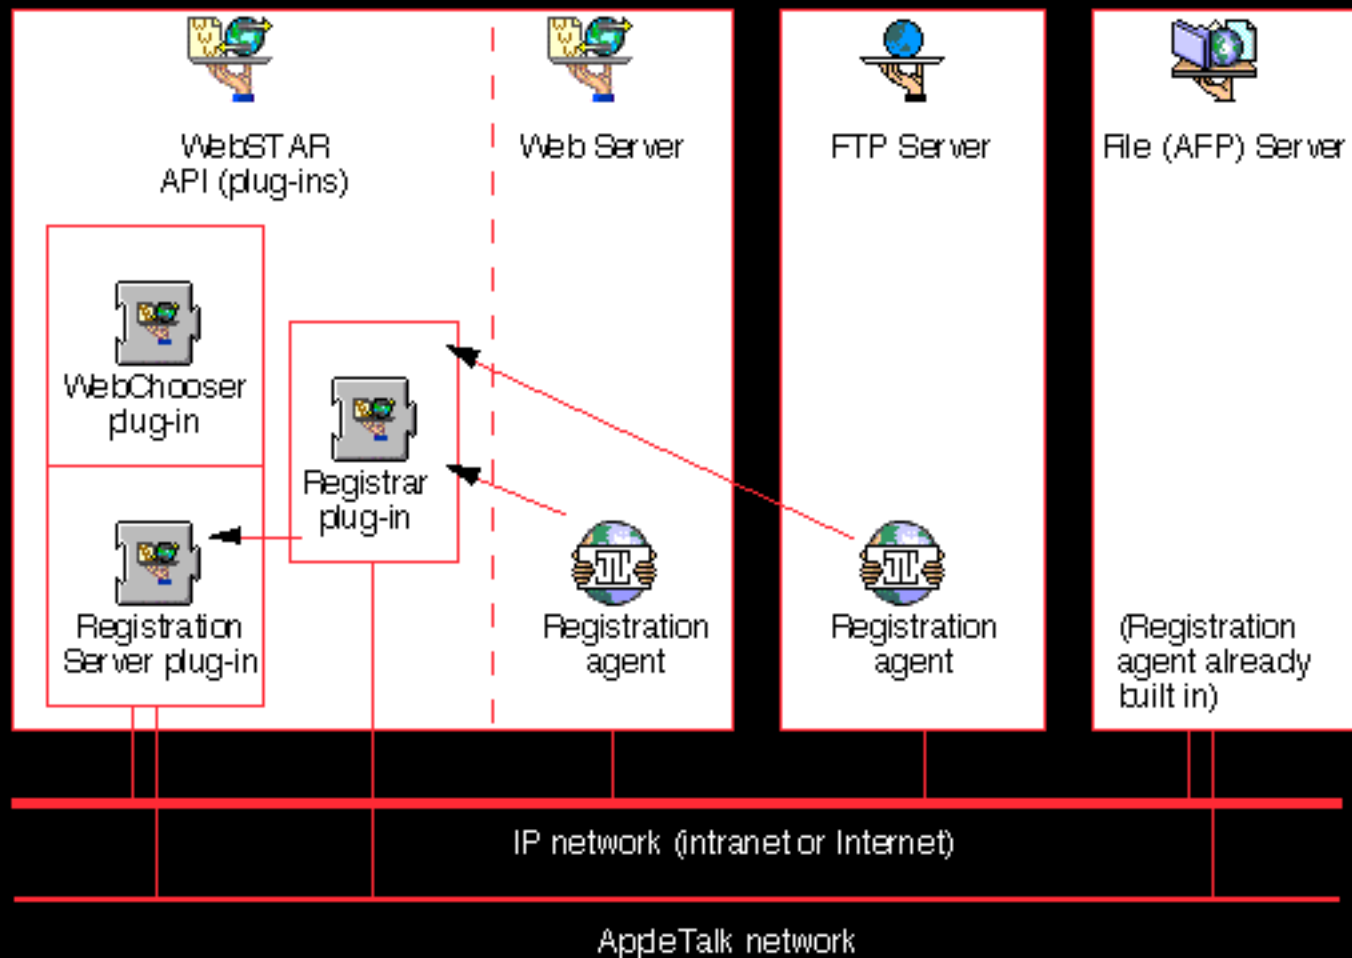

- **Bring AppleTalk's ease-of-use to the Internet (where the services are going anyway)**
- **Focus on Mac-based services and clients**
- **Be sure to include other platforms and Internet-standard protocols in the design**
- **Use AppleShare IP as the centerpiece ("it's a natural")**

# Open Door's Service Location Architecture

# Service Location and AppleShare IP

# Open Door's Public AppleShare IP Registration Service

---

- <http://www.opendoor.com/asip/>
- **Highly prototype! Will be much more automated in the future**
- **Will evolve**
- **Will include Web browser plug-in for mounting AppleShare IP servers**

Demo

Q&A

# VICOM Internet Gateway

*Alan Hart*

*Technical Director,  
VICOM Technology*

# AppleShare IP Networking

# AppleShare IP Networking

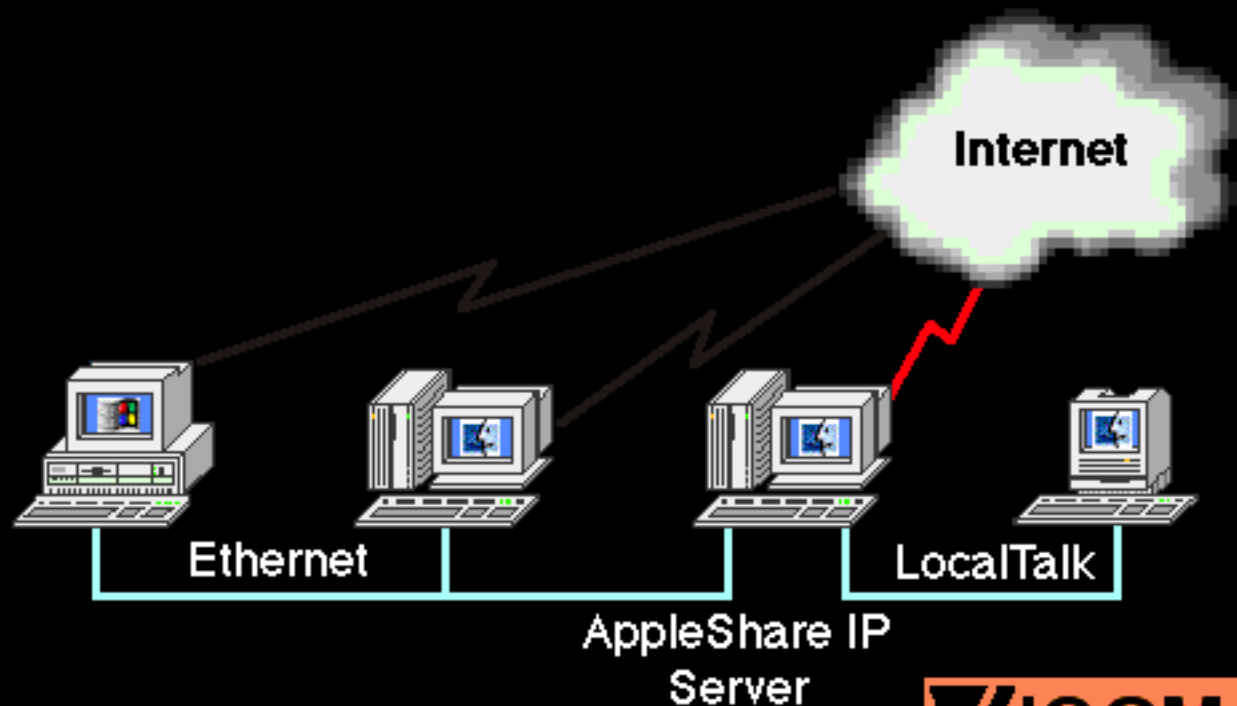

*We Do:*

# AppleShare IP Networking

*We Do:*

- Connect clients to the Internet

# AppleShare IP Networking

*We Do:*

- Connect clients to the Internet
- Configure IP clients

# AppleShare IP Networking

*We Do:*

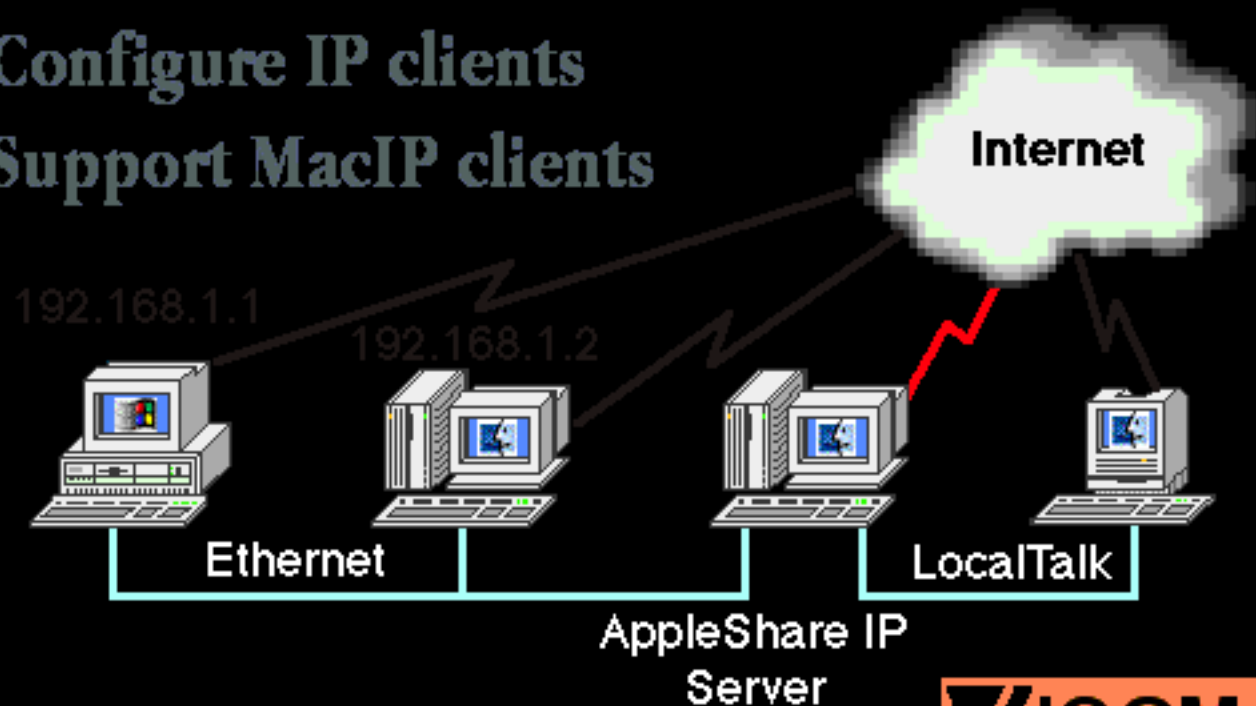

- Connect clients to the Internet
- Configure IP clients
- Support MacIP clients

# AppleShare IP Networking

*We Do:*

- Connect clients to the Internet
- Configure IP clients
- Support MacIP clients

# Connect Clients to Internet

## *Network Address Translation*

- **Single public IP address**
  - Reduces cost
  - Conserves scarce IP addresses
- **Inherent firewall protection**

# Network Address Translation

# Network Address Translation

# Network Address Translation

# Network Address Translation

# Connect Clients to the Internet

## *VICOM Internet Gateway supports*

- **Dial-on-demand using modem or ISDN**
  - PPP or SLIP protocol
  - PAP or login script
  - Inactivity time-out or sustained connection
  - Static or dynamic IP address
- **Leased line via modem or line driver**
- **Ethernet interface**
  - Cable modem
  - Router

# Configure IP Clients

## *Plug'n'Play IP configuration*

- Auto-setup with VICOM's Internet Guru
- Reads your MacPPP or FreePPP config.
- Built-in DHCP Server manages client addresses

# Support for MacIP Clients

## *Built-in MacIP Gateway supports*

- LocalTalk clients
- Apple Remote Access clients
- Clients behind AppleTalk-only routers
- Client-to-client connectivity
- Static or dynamic IP addresses

# Additional Features

---

- Internet access control
- Activity logging
- Remote dial-in server

# Internet Access Control

## *You can limit*

- Clients that can trigger a connection
- Clients that can use the Gateway
- IP addresses that can be reached
- Specific host names that can be reached
- Host name ranges using wild card rules

\*.com  
\*.edu

www.sextant.com

\*sex\*  
\*guns\*

# Activity Logging

## *You can track*

- Time-stamped dial-up actions
- Host addresses reached
- Traffic volume matrix

# Remote Dial-in Server

*Supports multiple PPP or SLIP dial-in ports*

- **User accounts are defined in Mac Users and Groups**
- **PAP or scripted access control**
- **Dial-in users access the same TCP/IP facilities as local clients**

# Current Status

## *Version 3.8.3 bundled with AppleShare IP*

- **5-user license with 5-user AppleShare IP**
- **25-user license with other packages**
- **Free upgrader to version 3.8.4 will be available at <http://www.vicomtech.com>**

# Version 3.8.4

## *New Features*

- **Multiple subnets on any ethernet interface**
  - Internal and external networks can share the same interface
- **More than eight Ports configurable**
- **CHAP support on dial-out**
- **Dynamic ethernet addressing for cable modems**

# VICOM SoftRouter

*The Internet Gateway's Entrant sibling*

- **Transparent multi-domain web hosting**
  - Any client, any server
- **No Network Address Translation**

# VICOM Internet Gateway Brings to the Party...

## *Comprehensive TCP/IP networking support*

- Shared Internet access
- Network Address Translation
- Hands-free network configuration
- MacIP gateway services
- Internet access control
- Remote dial-in

**VICOM**

Q&A

The background features a dark, textured surface with a glowing blue and purple sphere in the center. A white Apple logo is positioned at the top of the sphere. The text "Worldwide Developers Conference" is overlaid on the image. "Worldwide" and "Conference" are in a gold, serif font, while "Developers" is in a white, serif font inside a white rectangular box. The overall aesthetic is futuristic and tech-oriented.
